OBJECTIVE

Passionate and detail-oriented Full-Stack Developer with expertise in React, Next.js, Node.js, and MongoDB. Seeking to leverage my skills in building scalable, secure, and user-centric web applications to drive innovation at a forward-thinking company.

SKILLS

Frontend Development: Next.js, TypeScript, [React.js](#), Recat, Shadcn UI, TanStack Query, Tailwind CSS

Backend Development: Express js,, Node.js, REST APIs

Databases :MongoDB

Tools & DevOps: Git, GitHub, Docker

AI-Assisted Development: ChatGPT, Claude, GitHub Copilot (for optimized coding and debugging)

PROJECTS

1.Easy-RentBD

[Live-link](#) | [github-client](#) | [github-server](#)

Project Type: Full-Stack Web Application

Tech Stack: Next.js, React, TailwindCSS, Better Auth, Node.js, Express.js, MongoDB, JWT, ImgBB API

Project Purpose: A property rental platform for owners to list spaces and tenants to search/rent homes.

Key Features:

- **Role-Based Access Control (RBAC) & Security:** Engineered a secure dual-role system (Tenant vs. Owner) utilizing JWT, ensuring strict data privacy, fully isolated dashboards, and protected routes to prevent unauthorized access.
- **Scalable MVC Backend Architecture:** Structured the Node.js, Express, and MongoDB backend using the MVC (Model-View-Controller) pattern to ensure highly scalable APIs and optimized database CRUD operations for faster and more efficient performance.
- **Dynamic Data Handling & Form Validation:** Implemented dynamic state management and real-time form validation using React Hooks, paired with instant toast notifications to provide seamless live feedback and a frictionless user experience.

Challenges Faced: Handling seamless property image uploads without overloading the database or server storage, while ensuring the UI remains fast and responsive.

Solution: Integrated ImgBB API for cloud image hosting with drag-and-drop support and URL fallback to ensure seamless property uploads.

1.Turf-Sports Facility Booking Management System

[Live-link](#) | [github-client](#) [github-server](#)

Project Type: Full-Stack MERN Web Application

Tech Stack: Next.js, Node.js, Express.js, Better Auth, MongoDB

Project Purpose: Courtify is a sports facility booking platform that allows users to discover, book, and manage sports venues such as football turfs, badminton courts, tennis courts, and swimming facilities. The project solves the problem of manual reservation systems by providing a centralized and user-friendly online booking solution.

Target Users: Sports enthusiasts, facility managers, and casual users seeking to book sports venues.

Key Features:

- **Dynamic Facility Management:** Architected a robust management dashboard enabling seamless CRUD operations (Add, Update, Delete) for sports venues.
- **Smart Booking Engine:** Engineered a conflict-free reservation system featuring real-time slot allocation and automated dynamic price calculation.
- **Advanced Discovery System:** Implemented a high-performance browsing interface with multi-parameter search and smart filtering for optimized venue discovery.

Challenges Faced: Managing protected routes and keeping users logged in after page reloads.

Solution: Used JWT tokens stored in HTTPOnly cookies and middleware-based route protection to securely verify users without exposing tokens on the client side.

EDUCATION

Bachelor of Computer Science and Engineering (CSE)

SouthEast university,<Final year> CGPA:3.52 /4

AI Driven Web Development (Professional Training)
